

## LAB-11

**Question1:** Write the necessary Node script to make this code work for all arrays: `[1,2,3,4,5,6,7,8].even();` // `[2,4,6,8]` and `[1,2,3,4,5,6,7,8].odd();` // `[1,3,5,7]`. Test your code in Node.JS CLI.

**Question2:** Create a web server and

1- If the path is `/image`, send a response of an image to any client. Set an appropriate content-type for your image.

2- If the path is `/pdf`, send a response of a pdf file to any client. Set a Content-type as `"application/pdf"`.

3- If the path is `/home`, send `"Welcome to my website"` text to any client.
